EDUCATION

Post Doctoral researcher.... 2000-2002
Lund University, Lund, Sweden.

Main task:

The cells in vivo are surrounded by the extracellular matrix and thus exposed to a number of different components simultaneously. Understanding the organization of the extracellular matrix is thus crucial for understanding its functions in development and normal tissue homeostasis as well as in different pathophysiological conditions. We have focused our work on two different proteins / protein families. In the main project we were studying the Aggrecan family G3 domains and their functions. In a second project we were looking for the existence of other proteoglycan family members other than the 4 known ones and assessing the interactions and functions of PRELP, a unique heparin-binding member of the Leucine rich repeats.

Ph.D., Cell and Molecular Biology - November 1999.
